Extracting the data using SQL queries:	2
Calculating moving average	2
The chart	3
Observation	3

Extracting the data using SQL queries:

- `select * from city_list where country='Saudi Arabia'`
*to lookup for the nearest city
- `select avg_temp from city_data where city='Riyadh'`
*to extract local data to download it
- `select avg_temp from global_data`
*to extract global data to download it

Calculating moving average

I have calculating the moving average using excel add on data analysis

The chart

Observation

- Riyadh city was consistently hotter than the global average by more than 7 degrees
- Both temperatures are raising overtime.
- The world is getting hotter.
- Although global temperature was consistent for couple of years but the last 10 years had a noticeable raise in the global temperature.
